

Company Overview

Company Profile:

Hendee Enterprises has over 30 years of experience in manufacturing fabric structures and associated aluminum and steel frames. Hendee was founded in 1968 to develop products and services specialized for customer needs. In keeping with that goal, the Enduro® Fabric Awning Division was established to meet the increasing demand for awnings, illuminated canopies and signage. Later, the Enduro® Products Division was formed to design and produce custom shade panels, shade structures, windscreen and skylight shade. Hendee has developed a wide range of sizes and styles of shade structures to satisfy every need from residential to commercial. Our custom and standard products cover a complete line of fabric structures, including frame supported, tensile, tents and canopies.

Average annual number of employees is 120 and our manufacturing and office facilities, located in Houston, encompass 125,000 square feet of floor area.

By providing strong customer support and services that include design assistance, engineering, fabrication and nationwide installation of any size project, we have become the preferred vendor of garden center and greenhouse technology to new customers, as well as the customers we have serviced for the past 30 years. Hendee services many major national accounts as well as the military.
